Draft List of Eligible Low-Emission and Energy Efficient Vehicles using the Hybrid-to-Gasoline Vehicle Comparison Methodology as of February 5, 2016

This draft list is based on the most recent certification data available to EPA and was developed using the proposed gasoline-to-hybrid comparison methodology. This draft list could change depending on the methodology finalized during the rulemaking process. In addition, the list of eligible vehicles will be expanded as necessary to include additional model years certified by EPA. It is also important to note that an individual state's list may differ from these lists, since the states have the option to increase the stringency of the designated fuel economy percent increase values. States do not have the option to increase the emission standard stringency.

In order for a vehicle owner to determine if their particular vehicle would qualify, it is necessary to know the EPA engine family name (also referred to as 'test group name'), which is the unique EPA identifier pointing to the manufacturer's emission certification for that vehicle. This identifier is require to be printed on the emission information label under the hood of every vehicle.
